The system shall consist of ___Model Greentherm C 1050 ES NG/LP tankless water heaters as manufactured by Bosch Thermotechnology. Water Heater shall be CSA/ANSI Z21.10.3 listed. Water Heater shall have an input of 199,000 BTU/Hr with a gross output of 184,500 BTU/Hr when fired with natural gas. Water Heater shall operate with a 96% ANSI Z21.10.3 efficiency. Water Heater shall have a recovery of 285 gallons per hour at a 77°F temperature rise. Water Heater shall have Low NOx emissions and is 2012 SCAQMD NOx certified to rule 1146.2.

CONSTRUCTION
Water Heater shall be gas fired, condensing tankless design with a modulating power burner and negative pressure gas valve. Burner shall be capable of 10:1 turndown of firing, without loss of combustion efficiency. Primary heat exchanger/combustion chamber shall incorporate a multi pass copper tube and fin design with internal turbulators. Secondary condensing heat exchanger shall incorporate a multi-pass aluminum heat exchanger of fin tube design with copper water path to prevent galvanic corrosion. Heat exchangers shall be rated for maximum working pressure not less than 150 psig.

The Water Heater shall be equipped with a computer controlled active bypass valve that significantly improves water temperature stability. On the cold water inlet connection the Water Heater shall be equipped with an externally accessible in-line water filter.

The Water Heater control panel shall be a single printed circuit board in water-resistant plastic enclosure. The entire Water Heater control panel shall be Underwriters Laboratories approved.

The control panel shall contain: embedded control board incorporating LCD display to read temperature, and tactile buttons for output power, temperature, and programming control; CPU board houses all control functions; power transformer; ignition spark module; and unique connections.
transformer; ignition spark module; and unique connections for each sensor or component. The control board shall be field replaceable. The combustion safeguard/flame monitoring system shall utilize spark ignition and a rectification type flame sensor. The control panel hardware shall support wireless remote communications if the wireless module is installed. The controls shall include extensive self-diagnostic capabilities that incorporate a minimum of 20 separate fault codes and 8 programmable system categories.

The Water Heater shall come equipped with power cord and shall operate on 120V/1/60Hz electrical service.

INSTALLATION
All aspects of installation of Water Heater system shall be in strict accordance with manufacturer’s instructions. Materials shall conform to all manufacturer’s recommendations including a manufacturer listed vent system.

Venting options shall include PP twin pipe venting, schedule 40 PVC and CPVC, a PP concentric up and out vent system, and a PP common venting system for up to 4 Water Heaters in either side by side or back to back arrangement.

Water Heater system piping shall be field constructed of materials as specified. Water Heater shall be installed with individually isolating shutoff valves for service and maintenance, and a hot water hose connection for field testing. Water Heater shall have an ASME approved temperature/pressure relief valve with a setting of 150 psig. Water Heater shall require a minimum gas pressure of 3.5” W.C. (Natural Gas) at 1,000 scfh (full load rated capacity).

MODE OF OPERATION
Water Heater shall include integral factory wired operating controls to control all operation and energy input. Control of discharge water temperature shall be set through an internal setpoint with a field adjustment of 100°F to 140°F. A high temperature accessory shall be available that when installed allows the Water Heater to produce up to 184°F. Water Heater shall be capable of maintaining the outlet temperature within an accuracy of ±2°F*.

This shall be accomplished by modulation of firing rate from 100% to 10% of rated input. Water Heater shall operate with an Inverse Efficiency Curve, with maximum efficiency achieved at minimum firing input.

* based on static stability test

MULTI UNIT CASCADES
Up to 24 Water Heaters plumbed in parallel shall operate in a cascade configuration using the Cascading Kit. This accessory shall stage Water Heaters based on demand activating or deactivating other Water Heaters as needed.

WARRANTY
The heat exchangers shall carry a 15-year limited warranty against leakage due to defects in materials or workmanship or corrosion in a residential, non-direct recirculation system, subject to the manufacturer’s warranty terms and conditions and water quality requirements. All other parts and components provided by Bosch shall carry a 5 year limited warranty against defects in materials or workmanship subject to the terms and conditions of the manufacturer’s warranty.

OR

The heat exchangers shall carry a 5-year limited warranty against leakage due to defects in materials or workmanship or corrosion in a commercial installation, subject to the manufacturer’s warranty terms and conditions and water quality requirements. All other parts and components provided by Bosch shall carry a 5 year limited warranty against defects in materials or workmanship subject to the terms and conditions of the manufacturer’s warranty.

1) In accordance with the current CSA B149.1 Natural Gas and Propane Installation Code
2) In accordance with the current ANSI Z223.1 / NFPA 54 National Fuel Gas Code
3) A vent shall not terminate directly above a sidewalk or paved driveway that is located between two single family dwellings and serves both dwellings.
4) Permitted only if veranda, porch, deck or balcony is fully open on a minimum of two sides beneath the floor.

* For clearances not specified in ANSI Z223.1 / NFPA 54 or CSA-B149.1, one of the following shall be indicated:
  a) A minimum clearance value determined by testing in accordance with section 2.20, or;
  b) A reference to the following footnote:
  "Clearance in accordance with local installation codes and the requirements of the gas supplier."
